Art Unit: 2683

Response to Arguments

1. Applicant's arguments filed December 30, 2005 have been fully considered but are not convincing. Both the Applicant and Chmaytelli teach a combined PDA and wireless telephone that is handheld and is a mobile computer. Both the Applicant and Chmaytelli teach using a switch to manipulate the call based on whether a device is connected or disconnected to the PDA. However, instead of checking whether the speaker is connected to determine whether the cellular phone is off or on, the connection of the stylus is checked to determine whether the cellular phone is enabled or disabled see Column 1, Lines 44-46. Applicant's art is a slight modification in which the connection of the speaker/earplug/headset is checked to determine whether the cellular phone is enabled or disabled. Watanabe teaches using a switch to manipulate the call based on whether an earplug is connected or disconnected to the phone. Examiner has used the Watanabe et al reference to teach the limitation of checking the status of an earplug connection to a phone.
